

This directory "contrib" of the French Pro distribution contains contributions coming from people who want that specific "codes" run with the French Pro. They are given here in order to help.

updated 2002/08/05

Searching for Ronan KERYELL's old material, look at language/french/contrib/
Notice that "frbib" package is no more needed with french
which loads now by default bibliographic files for
translation of names and titles used usually by bliographic
styles.

Searching for French bst files you can also look at `smfplain.bst` available on CTAN.

At the present time, there is material in the "french bst" coming from:

Olivier ANDRIEUX provided a Natbib style (frplainnat.bst) to be used in French.
=====

Jens BERGER who initially provided file frjbbib.ldf for names used
===== in the Jurabib package. Few changes made by me.

Peter M\unster provided an ACM bib style and files (fracm*) for use in French.
=====

I still wait contributions from authors about other languages used in France or elsewhere in French speaking countries. Defaultly the languages "acadien", "canadien" and "patois" are alias of "french" in the language.dat file. I've currently collected the following information:

Alsatian language: nothing known at this day, except the well known
----- German files which may be used with french, mlp and
babel.

Basque language: hyphenation files from Juan M. Aguirregabira available
----- from <http://tp.lc.ehu.es/jma.html> (bahyph.tex). Support
from babel is also available.

Breton language: minimum support from babel is available. No hyphenation
 ----- files known to exist.

Occitan language: nothing available?

[illegible]
